

If you are installing a Series 50, Series 70, Series 80/80PLUS, Series 90/90 PLUS, or a Series 150 printer, unfortunately we don't have any Windows drivers for these printers and don't plan on developing any since they are our older printers. Instead you want to install a Generic/Text Only driver, which is included in Windows, and will allow you to print. When you go through the Add Printer Wizard, just select Generic for the Manufacturer, and Generic/Text Only for the Printer, and you should be ok and should be able to print to your printer. Please follow the [Windows Driver Installation Guide.pdf](#) instructions on how to do this.
